TECHNOLOGY

Load capacity

The PLURAFIT components are so stable due to their wall thickness, choice of material, ribbing and construction that they can be installed in the ground and driven over by cars with the appropriate cover.

UV stabilization

The PLURAFIT components are suitable for outdoor use thanks to UV stabilization.

Delivery and assembly

The PLURAFIT product variants are always supplied as individual components. The components are simply plugged together without special tools. If a connection is to be completely sealed, we recommend the PLURAFIT special sealant. In the Online Catalog you will find dimensioned drawings and instructions for many product variants.
